Notpla

Company Overview Notpla is a London-based sustainable packaging start-up. They are famous for creating edible "bubbles" that hold water and sauces. Their goal is to replace single-use plastics with materials made from the ocean, helping to reduce the amount of waste that ends up in our seas.

ESG Focus: Seaweed-Based Alternatives (Plastic-Free Packaging)

Why (The Problem) Plastic packaging can take hundreds of years to decompose. Even "biodegradable" plastics often require special industrial machines to break down. Furthermore, traditional plastic is made from chemicals that leak into the food chain and harm marine life.

How (The Solution) Notpla uses seaweed and plants to create packaging. Seaweed is a "super-resource" because it grows up to one meter per day, doesn't need fresh water or fertilizer, and actually removes CO2 from the ocean as it grows. They process this seaweed into films, coatings for food boxes, and small sachets (called "Ooho").

What (The Outcome) The result is packaging that is truly "home-compostable." Because it is made from natural seaweed, it disappears in nature within 4–6 weeks—just like a piece of fruit peel. It is even edible, meaning you can consume the packaging along with the liquid inside.

Impact: To date, Notpla has replaced over 3 million pieces of single-use plastic from major sporting events and food delivery services. They were a winner of the prestigious Earthshot Prize for their contribution to a waste-free world.
